THE NEXT GENERATION OF DISCRETE RIGGING INFRASTRUCTURE

ITE Multi-Purpose Rigging Points
100% AUSTRALIAN MADE

INTRODUCTION

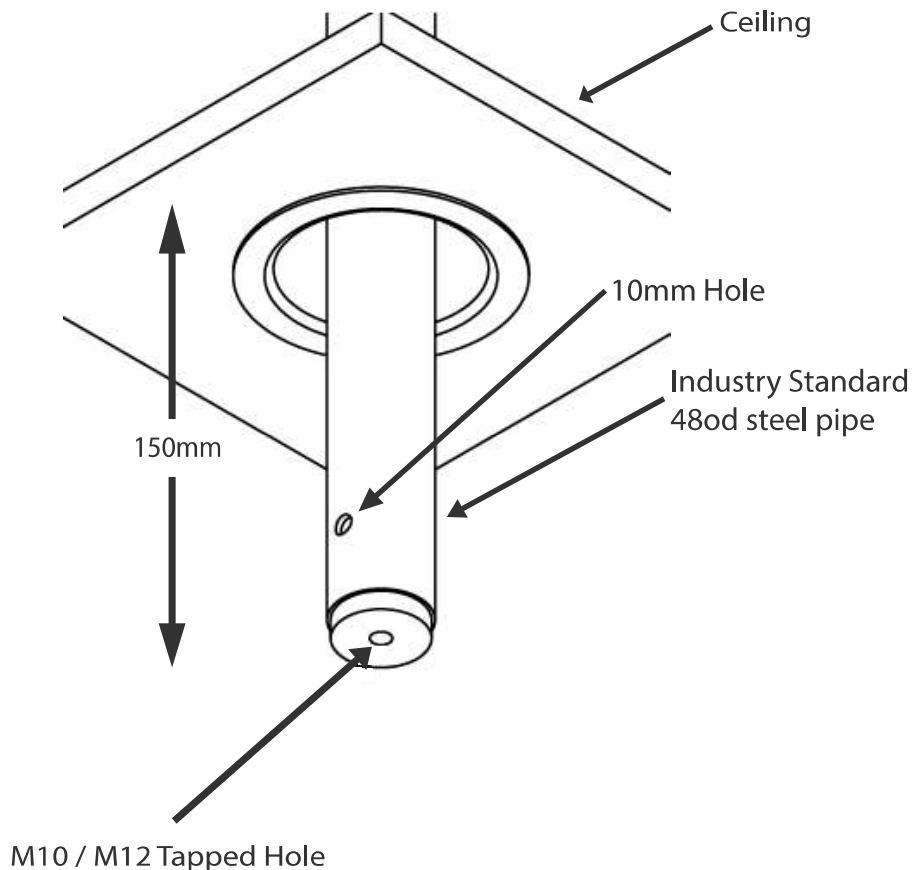

After 40 years working within the rigging industry, ITE have had the opportunity to design and install many different types of rigging infrastructure. Hotels in-particular began requesting discrete, heavy duty rigging infrastructure currently not available in Australia. These spaces required the rigging points to be discrete and disappear into the ceiling when not in use. Based on this specification, we designed the ITE Rigging Point.

The ITE Rigging Point is purpose built to suit spaces that require rigging infrastructure that is easily removable when not in use. They can be deployed quickly and easily and allow loads between 250kg - 500kg per rigging point.

Each Rigging Point is designed to be flexible and allow multiple types of attachment using industry standard rigging equipment such as scaffold clamps, eye bolts, shackles and slings. Truss or Pipe can also be used to span between the rigging points.

The top section of the rigging point is hidden within the ceiling, usually 40mm above finished ceiling level. The lower section protrudes through the ceiling 150mm. The lower section is easily removable allowing the rigging point to be hidden when not in use.
